

An End to Carrying the Car Seat on the Plane

For years when I traveled with my kids, I would carry their heavy, awkward car-seat with me through the airport. This was in addition to our over-stuffed carry-on bags of toys to keep them occupied through the entire flight. If that is not bad enough, try boarding a plane holding your child, this enormous car-seat and the bags of toys that now have grown even heavier with all the snacks we bought in the airport. If I had a dime for every head and elbow I banged while squeezing down the aisle of the plane to our seat, I would be able to charter a private jet to our destinations.

According to the U.S. Department of Transportation's Federal Aviation Administration (FAA), if there's turbulence, even the most loving arms can't hold your child. The safest place for a child on an airplane is not on a parent's lap but rather in an approved child safety device.

Family Travel Planet has found the perfect, safe and convenient solution - CARES (child aviation restraint system). CARES is the first and only FAA approved harness type child safety device for children weighing 22-44 pounds that attaches directly to the back of the airplane seat and enhances the regular seat belt

CARES weighs just one pound, folds to less than 6", installs in one minute and fits all size airplane seats. It made my trip through the airport and flight stress-free not to mention SAFE!

TO PURCHASE THIS REVOLUTIONARY NEW TRAVEL ITEM, [CLICK HERE](#).

One of the Family Travel Planet reviewers of this product says:

"My son is a bit too short for it. The straps that go over his shoulders rub his head. . .but we solved that by purchasing car seat strap covers [seen below]. It is so easy to carry, fits into my diaper bag. I can't tell you how much I love it!"
